# Table of Sigma-t with Intervals of 0.1 for Temperature and Salinity

By

BETTY ANN L. KEALA, Statistician  
Bureau of Commercial Fisheries Biological Laboratory  
Honolulu, Hawaii

## INTRODUCTION

The following table presents values of sigma-t for a range of temperature of  $-2^{\circ}$  to  $33^{\circ}$  C. at intervals of  $0.1^{\circ}$  and for a range of salinity of 2 parts per mille to 39 parts per mille at intervals of 0.1 part per mille. These are essentially the same ranges of salinity and temperature as those covered by Knudsen's tables (Knudsen, Martin, editor. 1901. Hydrographical tables. Copenhagen, G.E.C. Gad, 63 p.). The values were computed by means of a program written for the I.B.M. 7040 computer using the equations for sigma-t found in Knudsen's publication. This same program also prepared the listing of the values, of which the following table is an exact reproduction.

Knudsen's equations are known to be in error to a significant extent at extremes of the temperature and salinity range (Carritt and Carpenter, "The composition of sea water and the salinity-chlorinity-density problems," 1959. NAS-NRC publication 600, p. 67-86). However, until a satisfactory revision is available, Knudsen's equations provide for internal consistency in the

oceanographic literature, with a degree of accuracy that is entirely adequate for most purposes.

Although tables similar to the present table have been published before, all require interpolation between relatively wider intervals of temperature or salinity, or both, than does the present table, or they cover limited ranges of temperature and salinity. Since the dependence of density, and therefore of sigma-t, on temperature and salinity is nonlinear, interpolation by the usual linear method introduces errors which may be significant where precision is important. The present table minimizes the effects of interpolation errors by limiting the ranges over which linear interpolations must be made and by using five significant figures. The table is most useful for precise work, particularly when salinity determinations are made by conductivity methods, which can be almost an order of magnitude more precise than titrations.

Richard A. Barkley provided advice and encouragement.

5 WHSE 01632

Created in 1849 the Department of the Interior--a department of conservation--is concerned with the management, conservation, and development of the Nation's water, fish, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.
